

I am

farmer

farmer

farmer

farmer

I'm trying to

Irrigate the  
crops

protect crops from  
wild animals,birds  
and pests

Maintain crops against  
various environmental  
factors such as  
temperature,climate,  
topography and soil quality

to use  
fertilizers

But

I unable to  
irrigate all crops

all crops are  
damaged

crops are  
destroyed

improper  
growth of crops

Because

of insufficient  
labour forces

it is impossible  
to give 24 hours  
security to crops

of improper  
maintenance of  
crops

lack of knowledge  
in usage of  
Fertilizers

Which makes me feel

to be improved  
using  
automation.

to provide  
extra care.

to provide  
regular  
maintenance.

to improve my  
knowledge in  
using fertilizers.
